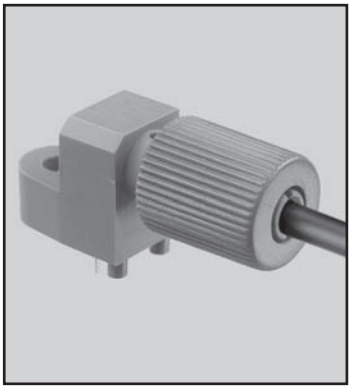
156 Mbps Plastic Fiber Optic Red LED IF E99B

4/2/12



Applications

- PC-to-Peripheral Data Links
- Motor Controller Triggering
- Ethernet LANs
- Medical Instruments
- Automotive Electronics
- Digitized Video and HDTV
- Sonet/SDH Transmitters
- Robotics Communications
- Isolation from Lightning and Voltage Transients

Description

The IF-E99B is a very high-speed red LED housed in a "connector-less" style plastic fiber optic package. The output spectrum of the IF-E99B is produced by a GaAIAs die that peaks at a wavelength of 650 nm, one of the optimal transmission windows of PMMA plastic optical fiber. The device package features an internal micro-lens, and a precision-molded PBT housing ensures efficient optical coupling with standard 1000 µm core plastic fiber cable.

Application Highlights

The fast transition times of the IF-E99B make it suitable for high-speed digital data links. Link distances in excess of 75 meters at data rates of 156 Mbps are possible using standard 1000 µm core plastic fiber and an IF-D98 photologic detector. The wide analog bandwidth permits direct modulation at RF frequencies exceeding 70MHz. Drive circuit design for the IF-E99B requires good RF and digital design techniques, but is much simpler than required for laser diodes, making it a good low-cost solution in a variety of high frequency POF analog and digital applications.

Features

- No Optical Design Required
- Mates with Standard 1000 µm Core Jacketed Plastic Fiber Cable
- Internal Micro-lens for Efficient Coupling
- Inexpensive Plastic Connector Housing
- Connector-Less Fiber Termination and Insertion
- Interference-Free Transmission from Light-Tight Housing
- Excellent Linearity
- Visible Light Output
- RoHS compliant

Maximum Ratings

(T_A =25°C)

Operating Temperature Range (T_{OP}).....-0°to 60°C

Storage Temperature Range (T_{STG}).....-40° to 85°C

Junction Temperature (T_J).....75°C

Soldering Temperature (2mm from case bottom) (T_S) t ≤ 5 s.....240°C

Reverse Voltage (V_R).....3 V

Power Dissipation (P_{TOT}) T_A =25°C.....130 mW

De-rate Above 25°C.....1.7 mW/°C

Forward Current, DC (I_F).....50 mA

De-rate Above 25°C.....0.57 mA/°C

FIBER TERMINATION INSTRUCTIONS

1. Cut off the ends of the optical fiber with a single-edge razor blade or sharp knife. Try to obtain a precise 90-degree angle (square).
2. Insert the fiber through the locking nut and into the connector until the core tip seats against the internal micro-lens.
3. Screw the connector locking nut down to a snug fit, locking the fiber in place.
