1. AC Input Characteristics

1.1. Input Voltage

The PSU is capable of supplying full rated output power over the input range of 108 to 305VAC RMS. Its nominal voltages are 120 and 277VAC. The PSU is capable of start-up (power-on) at 108VAC and 47 Hz minimum

Condition	Minimum	Maximum	Units
Nominal	120	277	Vrms
Variable	108	305	Vrms

1.2. Input Frequency

The PSU operates with an input frequency range of 47 – 63Hz.

Condition	Minimum	Maximum	Units
Nominal	50	60	Hz
Variable	47	63	Hz

1.3. Input Current

Maximum steady state input current is 0.18A (Max.) @120Vac.

Input Voltage	Maximum	Units
120Vac/60Hz	0.18A	Amps(RMS)

1.4. Range Switching

The PSU can accept 120Vac to 277Vac full input range. No range switching is necessary or possible.

1.5. Inrush Current

The cold or hot start inrush current should be less than 20A and not cause the fuse open or component damaged. (The Time duration at 50% of Ipeak is 350usec.)

SPECIFICATION No.	
DATE OF ISSUE	2014. 07. 24

LED Driver

REV.NO.	PAGE
02	5 /18

1.6. Power Factor

Power factor must higher than 0.9 @ 120-277Vac with the output current greater than 57% of rated current and the total output power higher than half load conditions.

Parameter	Symbol	Condition	Specifications			Units
			min.	typ.	max.	
Power Factor	PF	Vac= 120-277Vac Io= 0.275-0.5A, Vo=20-50V Po>7.5W	0.9	-	1.00	

1.7. THD (Total Harmonic Distortion)

THD must lower than 20% @ 120-277Vac with the output current greater than 55% of rated current and the total output power higher than half load conditions.

Parameter	Symbol	Condition	Specifications			Units
			min.	typ.	max.	
THD	TH	Vac= 120-277Vac Io= 0.275-0.5A, Vo=20-50V Po>7.5W	-	-	20	%

1.8. Power Saving

At stand-by mode, the power consumption should less than 1W. The stand-by mode is definition by the AD pin supplied from external DC voltage under 1V.

Parameter	Symbol	Condition	Specifications			Units
			min.	typ.	max.	
Power saving	--	Vac= 120-277Vac	--	--	1	Watts

LED Driver

2. DC Output Characteristics

2.1. Output Voltage and Output Current

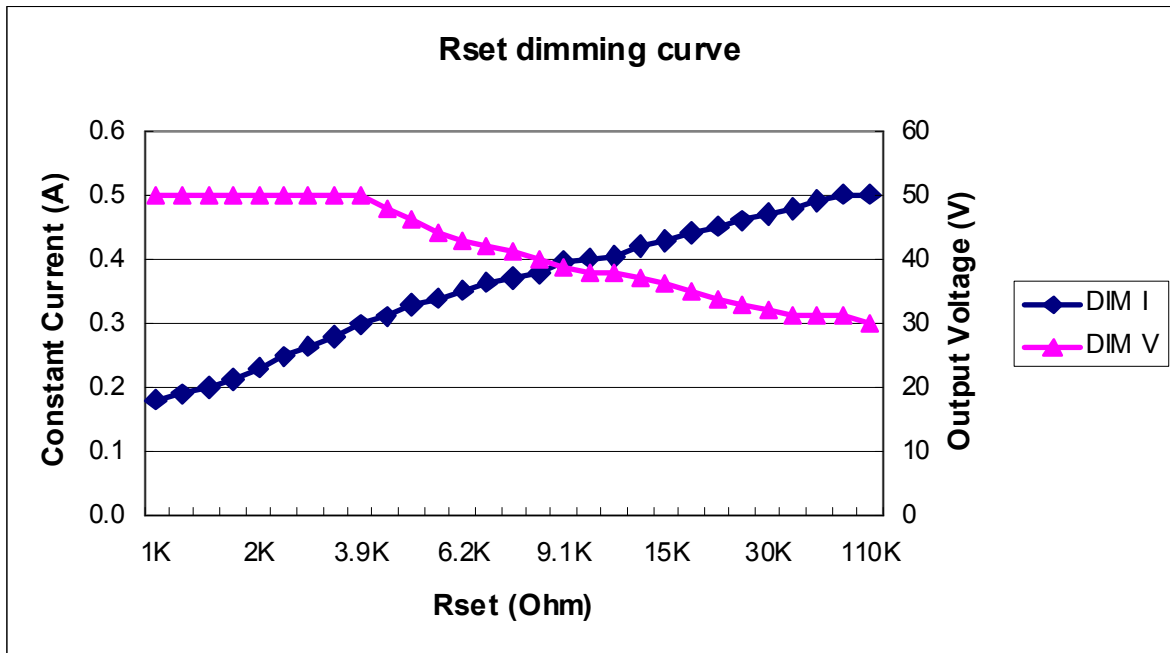

The output current can be adjusted by the Rset resistor. This item is tested under LED mode of E-load and the Rd coefficient should setting at 0.21.

The output condition is as following curve. The tolerance of output voltage should be within $\pm 2\%$ of setting value and output current should be within $\pm 5\%$ of rated current.

The output current adjusted method is following below:

1. Disconnected Rset resistor to set full load at 30V/0.5A condition.
2. Connected the Rset resistor value to adjust the output current*. The Rset resistor connected to 3.9KOhm, the output is setting to full load at 50V/0.3A condition.
3. The PSU should has the minimum output current at 0.18A when the Rset resistor less than 1Kohm

* The Rset value is referring to Appendix A.

The output Voltage range is referring from following form :

Parameter	Condition	Minimum	Normal	Maximum	Units
Operating Voltage	Io= 0.18 ~ 0.5A	20	--	50	Volts
Output Power	Io= 0.18 ~ 0.5A Vo = 20~50V	3.6	--	15	Watts

SPECIFICATION No.	
DATE OF ISSUE	2014. 07. 24

LED Driver

REV.NO.	PAGE
02	7 /18

* The output voltage is limited by max output power. When the output current is 0.5A, the maximum output voltage will be 30 volts. If the output current is setting to 0.3A by Rset resistor, the maximum output voltage will be up to 50 volts. The detail value is referring from Appendix A.
The output power coverage is referring from following:

2.2. Turn-On Delay Time

DC output turn-on delay time should less than 1 second at 108Vac input and typical load condition.
(30V/0.5A)

The turn-on delay time is measured from “AC turn on” to “output reach 95% of rated current”.

2.3. Efficiency

The efficiency should greater than 83% at output condition 30V/0.5A and 50V/0.3A under 120V/60Hz and 277V/50Hz. (The PSU should warm up under full load condition at least 30 minutes).

SPECIFICATION No.	
DATE OF ISSUE	2014. 07. 24

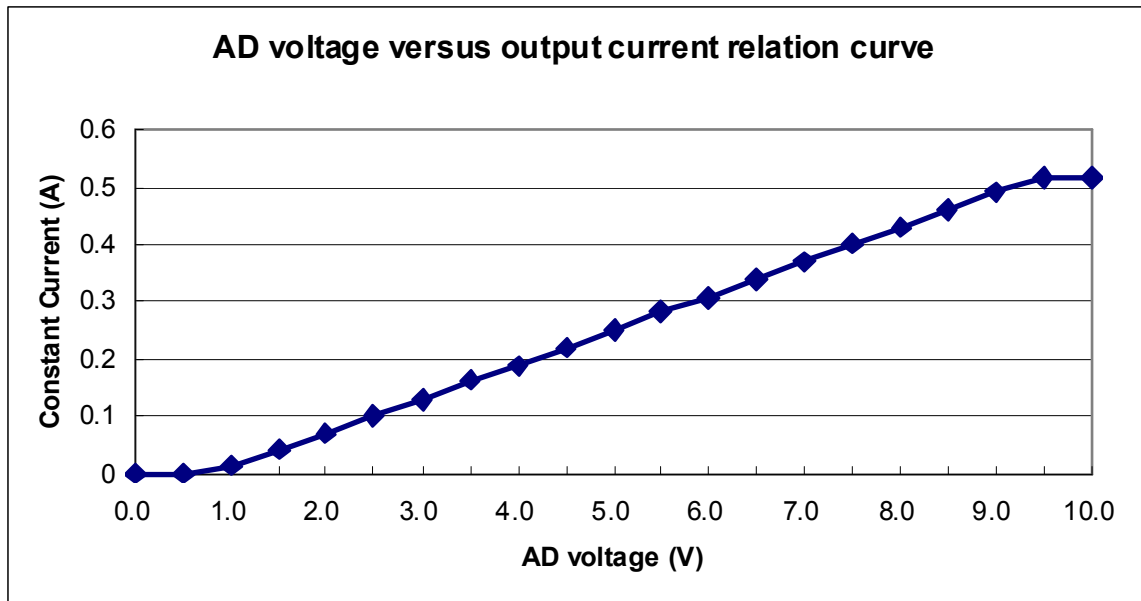

LED Driver

REV.NO.	PAGE
02	8 /18

2.4. Dimming

The PSU has AD dimming function. It must be used with DC 0~10V. Dimming Curve is as below:

(The current of LED module is 0.5A \pm 5% at full load condition.)

3. Protection Requirements

1.1. Short Circuit Protection

The PSU should be protected when the output short and do not result in a fire hazard, shock hazard, or damage to the PSU. The protection is auto-recovery mode. The test procedure is setup at LED mode and short V+ to GND, after the fault condition removed, the PSU should be auto-recovery and works normally.

1.2. OVP Protection

When No Load Condition occurs, the PSU should Clamp output voltage at the OVP Voltage and not to damage the PSU. The OVP Voltage can adjust by Rset. After the Load is switch on, the PSU should be works normally. The OVP Voltage can adjust by Rset. OVP Voltage is referring from following curve.

The maximum OVP voltage should be under 56V

LED Driver

Output Name	Over Voltage Limit	Protection
V _o	< 56V	Auto-reovery

4. Environmental (Temperature and Humidity)

4.1. Operating

Temperature	The PSU shall operate from -20°C to 50°C.
Relative Humidity	10% to 90% relative humidity.
Altitude	2,000 feet above sea level or 10,000 feet above sea level with a 32°C maximum ambient air temperature.

SPECIFICATION No.	
DATE OF ISSUE	2014. 07. 24

LED Driver

REV.NO.	PAGE
02	10 /18

4.2. Shipping / Storage

Temperature	The PSU can be storage from ambient -25°C to 80°C.
RelativeHumidity	20% to 90% relative humidity.
Altitude	20,000 feet above sea level.

5. Isolation (High Potential Testing)

5.1. Dielectric Strength (HI-POT)

One hundred percent (100%) of PSU shall comply with the minimum production line Hi-Pot (High Potential) test as noted below. The test shall be applied between the L/N (AC Line and Neutral) to Output Terminal (Vout and RTN).

Parameters	Setting
Voltage	3750 Vac minimum
Trip Current Sensitivity	10 milli-amperes maximum
Voltage Ramp Time	500 V/Second ramp minimum
Dwell Time	60 seconds for safety apply, 3 seconds for mass production(4000 Vac)
Breakdown Arc Detection	10 microseconds maximum

One hundred percent (100%) of PSU shall comply with the minimum production line Hi-Pot (High Potential) test as noted below. The test shall be applied between the L/N (AC Line and Neutral) to PE (Chassis/Input receptacle ground terminal).

SPECIFICATION No.	
DATE OF ISSUE	2014. 07. 24

LED Driver

REV.NO.	PAGE
02	11 /18

Parameters	Setting
Voltage	1500 Vac minimum
Trip Current Sensitivity	10 milli-amperes maximum
Voltage Ramp Time	500 V/Second ramp minimum
Dwell Time	60 seconds for safety apply, 3 seconds for mass production(1800 Vac)
Breakdown Arc Detection	10 microseconds maximum

5.2. Insulation Resistance

One hundred percent (100%) of PSU shall comply with the minimum production line Insulation Resistance test as noted below.

The test shall be applied between the L/N (AC Line and Neutral) to Output Terminal (Vout and RTN).

Parameters	Setting
Voltage	500Vdc minimum
Dwell Time	60 seconds for safety apply, 3 seconds for mass production
Insulation Resistance	4 M ohms

One hundred percent (100%) of PSU shall comply with the minimum production line Insulation Resistance test as noted below. The test shall be applied between the L/N (AC Line and Neutral) to PE (Chassis/Input receptacle ground terminal).

Parameters	Setting
Voltage	500Vdc minimum
Dwell Time	60 seconds for safety apply, 3 seconds for mass production
Insulation Resistance	2 M ohms

SPECIFICATION No.	
DATE OF ISSUE	2014. 07. 24

LED Driver

REV.NO.	PAGE
02	12 /18

5.3. Leakage current

The maximum leakage current is 700uA at 277Vac 60Hz with resistive load.

(Please refer to IEC 60950).

Parameters	Setting
Input Voltage	277Vac/60Hz
Leakage Current	700 micro-amperes maximum

5.4 Earth continuity(IEC61347)

One hundred percent (100%) of PSU shall comply with the minimum production line Insulation Resistance test as noted below. The test shall be applied between the PE (Input receptacle ground terminal) to PE (Chassis).

Maximum resistance: 0.50Ω. Measured by passing a minimum current of 10 A with a no-load voltage not exceeding 12 V for at least 1 s

Parameters	Setting
Voltage	12V maximum
Current	10A minimum
Dwell Time	60 seconds for safety apply 3 seconds for mass production
Maximum Resistance	0.5 ohms

6. Safety & Requirements

6.1. Safety

The PSU should meet following requirements:

Standard	UL/cUL	UL60950 + UL8750
-----------------	--------	------------------

SPECIFICATION No.	
DATE OF ISSUE	2014. 07. 24

LED Driver

REV.NO.	PAGE
02	13 /18

6.2. EMI

The PSU should meet following requirements. The test voltage has tested under 120Vac/60Hz at full load. The margin limit is under 3dB.

Standard	FCC	FCC Part 15 Class B
-----------------	-----	---------------------

6.3 Surge

The PSU Should meet floolwing requirements :

Standard	IEC / EN	IEC/EN61547
-----------------	----------	-------------

Characteristics	Test Level		
	Equipment		
	Semi-luminaire	Independent driver	
		Input Power Level	
	$\leq 25W$	$> 25W$	
Waveform	-	-	1.2/50 μs
Test Level	L-N	-	± 1 kV
	L/N - GND	-	± 2 KV

Note: L-N Use Low impedance (2 ohm) five times for each phase.

Note: L/N - GND Use High impedance (12 ohm) five times for each phase

*The surge test level is follow the ">25W" defined by customer requirement

6.4. ESD(Electrostatic Discharges)

The PSU with lighting fixture should meet following requirements:

ESD can not be tested with PSU stand alone must test with lighting fixture.

Standard		Test Specification
ESD	IEC 61000-4-2	Contact Discharge $\pm 4KV$
		Air Discharge $\pm 8KV$

SPECIFICATION No.
