

USB Microscope with digital camera for inspection

ESD safe

The Weller microscope with digital camera and USB interface will convince you with its high level of versatility and mobility

This high-quality microscope with digital camera and USB interface is an economical solution for tasks with diverse magnification requirements. It is designed for use as part of a dedicated workstation, in quality assurance operations or for educational purposes. The image of the object being examined can be transmitted as a digital photo or video to your PC via the fixed-mounted USB cable and displayed in exceptional detail. The metal housing of the microscope is ESD safe. The microscope is ideal for industrial applications.

Advantages for you

- High resolution: 1,3 MP
- Effective magnification rate: 20X – 90X
- Long working distance: 45 mm at 90X, 300 mm at 20X
- Measurement and calibration features
- Eight built-in LEDs provide a high level of illumination
- Can be easily operated manually or alternatively be mounted in a static or adjustable work stand
- Micro-touch trigger for easy saving of your results either as a digital photo or a video. Required software is included.
- You can save the image of the object being examined easily and analyse it immediately or send your results as an email or incorporate it into a presentation.

The Weller microscope with digital camera and USB interface is designed for professional applications but is easy to operate and its portability makes it a very versatile piece of equipment.
