CONSTRUCTION

The resistors are constructed on top of a high-grade ceramic body. Internal metal electrodes are added at each end and connected by the resistive glaze. The resistive glaze is covered by a leadfree glass. The composition of the glaze is adjusted to give the approximate required resistance value and laser trimming of this resistive glaze achieves the value inside tolerance. The whole element is covered by a protective Epoxycoat. Finally, the two external terminations (Ni / matte tin) are added. See fig. 2.

Fig.2

ORDERING EXAMPLE

The ordering code of a RC0100 chip resistor, value 10 Ω with ±5% tolerance, supplied in 7-inch tape reel is: RC0100JR-0710RL.

NOTE

1. All our RSMD products meet RoHS compliant and Halogen Free. "LFP" of the internal 2D reel label mentions "Lead Free Process".
2. On customized label, "LFP" or specific symbol can be printed.
